BioGuard® 3-Step Pool Care Programs

BioGuard® makes pool care simple with our 3-Step programs. Maintain beautiful, sparkling clear water in just 3 simple steps.

1. Sanitize to kill bacteria
2. Oxidize and clarify for sparkling clear water
3. Prevent algae growth

Visit our website at www.bioguard.com and let our Pool Program Prodigy help you decide if this program is right for you. Once you decide on the program that best suits your needs, simply follow the steps, keep up maintenance, and enjoy clear, beautiful results.

Option One: The BioGuard® Once-A-Week 3-Step Program

If you prefer a chlorine system that's simple to use, this is the program for you. Ideal for above and in-ground pools of almost any size, it works best where there's good water flow through the skimmer and adequate skimmer basket area. All it takes is three simple steps:

STEP 1: Sanitize with Smart Sticks®

BioGuard® Smart Sticks kill bacteria continuously by maintaining proper chlorine residual. They last up to twice as long as ordinary chlorinating sticks, tablets or pucks and only dissolve when your pump is on—saving you money on sanitizer.

STEP 2: Oxidize with Smart Shock

A smarter way to shock, oxidize, buffer and clarify with multi-functional Smart Shock. And its special blue algicide crystals kill algae. Better still, swimmers can re-enter the pool in as little as 15 minutes after treatment with this premium product that requires no mixing or pre-dissolving.*

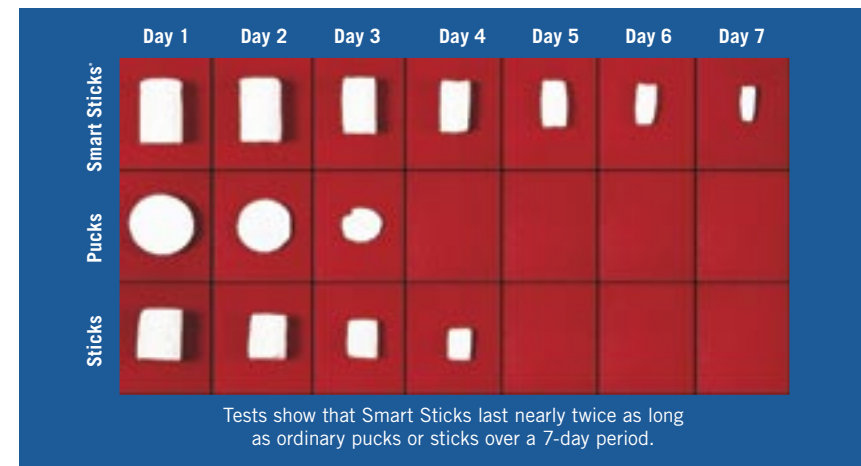

* Refer to re-entry statement on the back panel of Smart Shock for further guidance.

STEP 3: Prevent Algae with Back Up®

Prevent algae before it starts with this important final component. This step works in combination with the first two to create layers of protection against algae. Rely on long-lasting Back Up to work even harder when you need it most—especially during mid-summer when water temperatures rise. There's no mixing or pre-dissolving necessary. Use non-foaming Algae All 60™ in pools with attached spas or water features.

Smart Sticks® vs. Pucks: What's the difference?

Plain and simple, Smart Sticks do a better job of sanitizing, preventing algae and killing bacteria than ordinary pucks or tablets. That's because the patented, slow-dissolving technology behind our unrivaled sanitizing product ensures optimal chlorine residual for your pool when used as part of your pool care maintenance routine. See for yourself!

Add Optimizer Plus® for extra sparkle

Don't miss this important step! Enhance either 3-Step Program simply by adding Optimizer Plus. Besides producing a diamond-like sparkle and incredibly soft feeling water, it also provides another layer of protection to help suppress algae. (Not available in California.)

Option Two: The BioGuard® 3-Step Program with SilkGuard™

Great for busy pools of any size or surface type, this program should be used with pools featuring good water flow through skimmers or equipped with a chlorinator. Even with consistently heavy bather loads, you'll enjoy effective results throughout the pool season. Products in this program vary, but the same three basic steps apply:

STEP 1: Sanitize with Silk Tabs™ or Silk Sticks™

Silk Tabs and Silk Sticks, the latest innovation from BioGuard®, make your water feel extraordinarily soft and smooth. What's more they contain SilkGuard™, a unique additive that protects your equipment from corrosion, stains and hard water scale while killing bacteria. This chlorinating product also contains SunShield®, which protects chlorine from sunlight for longer-lasting sanitation of pool water. Silk Tabs and Silk Sticks can be dispensed through the skimmer, floater or with an automatic chlorinator.

STEP 2: Restore water sparkle with Burn Out Extreme®, Burn Out 35 or Smart Shock®

Apply Burn Out Extreme or Burn Out 35 every week to destroy organic contaminants commonly found in pool water. Both products kill algae and restore sparkle. Smart Shock is also a great alternative oxidizer for this program. Simply follow the instructions for Step 2 under the Once-A-Week program for best results.

STEP 3: Prevent algae with Back Up®

Don't skip this step! Prevent algae with Back Up. Stop it before it starts. Back Up is a highly effective, broad spectrum algae preventative. If the pool has an attached spa or water feature, use non-foaming BioGuard Algae All 60 instead.
